Ventana principal del IIG.

#### Interactive VNMO limits picking

- In order optimize the automatic VNMO search and avoid undesirable n picking utility.
- VNMO search is carried out inside the limits selected by user as time

#### Impressive Plotting Capabilities

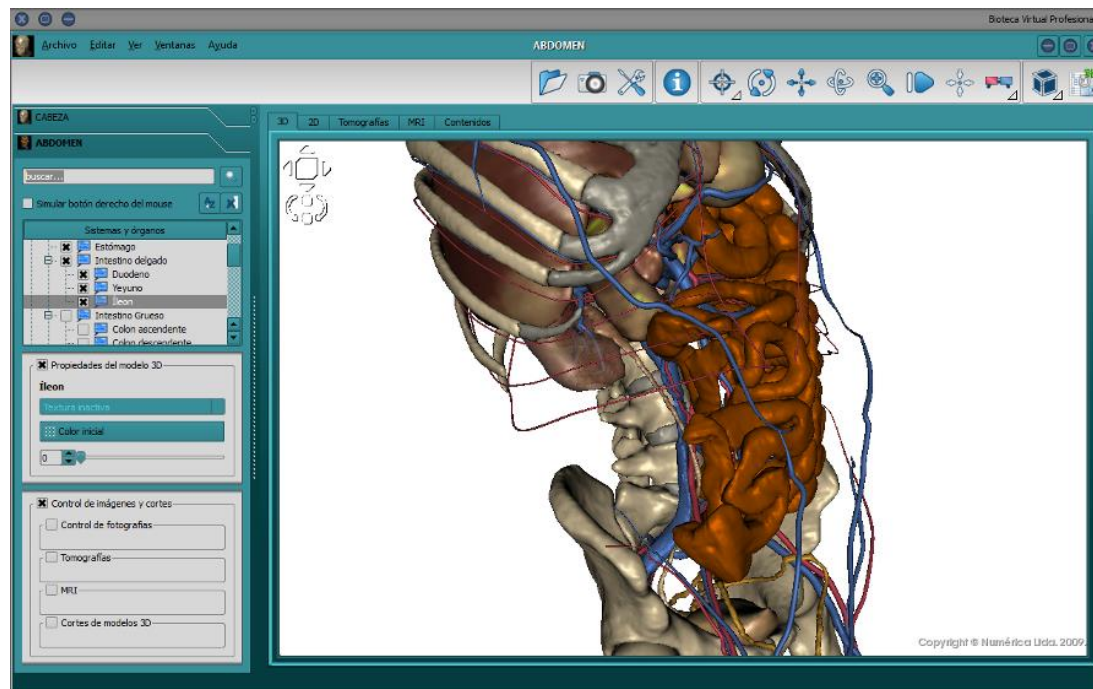

- Wiggle and Color display modes.
- Sort headers as desired.
- Create movies.
- Fast Fourier Transform.
- Direct connexion to the project data base to easy select input files.

#### Características

# BioTK

Investigación e implementación librerías Open GL	Enero 2003	Julio 2003
Definición de la plataforma de la versión 1.0 de <b>Bioteca Virtual®</b>	Enero 2003	Enero 2003

2010

# The Problem

All around the world, **the basis of the study of medicine and health sciences** is the **study of human anatomy itself.**

**It is performed by the dissection of cadavers in the amphitheater, by many students in very limited time.**

It is **not easy to find cadavers** to make dissections.

# Our Challenge

To find a complementary way to **visualize the human body** in an **accurate, realistic, portable and economic** way.

# Who is trying to solve this?

About ten 3D anatomy atlas in the global market,  
Very similar features (pan, zoom, rotate,  
show/hide organs)

**The organs are modeled using 3D modeling  
SW**

This is nice but perhaps not accurate enough for the medical market

# BioTK's way

The organs included in BioTK instead are **reconstructed** from sections of a cadaver\*, leading to **more accurate and realistic** models.

# BioTK is a unique product

- After more than **8 years of R&D**
- A **virtual cadaver compatible** with web browsers, desktops, laptops, tablets and 3D projectors.
- BioTK can help **improving the quality of education** for medical and health science students all around the world

# Team

## Medical Team

Anatomist Dr. Luis Ballesteros, MD., MSc.

- Universidad Industrial de Santander.
- Medical doctors.

## Technology Team

Numerica's I&D director Eng. Felix Cordoba

- Computer scientists.
- Digital image processors.
- 3D modelers.

# Market

- Medical and health sciences faculties and students worldwide.
- Teaching hospitals worldwide.

# Looking for

We are aiming to **disrupt** the teaching and learning anatomy all around the world, we are looking for:

- Universities and teaching hospitals for immediate implementation in teaching and learning anatomy
- Universities and teaching hospitals for customization projects for any use
- Hospitals for immediate implementation in patient education
- Commercial partners for global and local marketing and sales
